For Immediate Release

PCT Releases CIII A New Optical Ethernet Solution for Advanced Commercial Service Applications

GILBERT, AZ, June, 2006 - PCT International, Inc. (PCT), a leading manufacturer of RF drop and optical networking products, announced today that its CIII Distribution Platform is ready for market release.

Further demonstrating its expertise in the use of Optical Ethernet for commercial service applications, PCT has introduced a next generation solution with advanced tagging and prioritization capabilities. "Many of our customers utilize our optics along with a third party switch or router at the customer premise," states Brandon Wilson, Vice President, Product Management. "However, this router or switch can be eliminated by integrating several key features into the distribution platform such as double tagging, application QOS, and redundancy. It eliminates one point of failure while continuing to perform as a single copper port hand off."

As customers and services become more sophisticated, a variety of techniques will be utilized in order to implement managed solutions with a high degree of reliability and flexibility. PCT's new CIII distribution platform takes the next step in creating a powerful, yet easy to implement, solution for commercial services.

Visit the PCT booth #873 at the SCTE Cable-Tec Expo in Denver, CO to see demonstrations and samples of this and other PCT products.

About PCT International, Inc.

Founded in 1997, PCT International, Inc. (PCT) is a leading worldwide manufacturer of high-performance optical networking and RF products for broadband communication networks. PCT is headquartered in Gilbert, AZ and is a subsidiary of Andes, Inc. More information about PCT and its products is available at www.pctinternational.com.
