FOR IMMEDIATE RELEASE

PCT Releases New Coax Adapter for IP Upgrades

GILBERT, AZ – August 21, 2006 – PCT International, Inc. (PCT), a leading manufacturer of RF drop and optical networking products, announced today that its coax adapter is ready for market release.

“The Adaptix™ line of Ethernet over Coax adapters presents a really exciting opportunity for our customers in the security market. The industry at large is rapidly adopting and deploying IP cameras due to their numerous benefits over analog cameras. However, upgrading existing analog cameras, which use coaxial cable as a transmission path can be tricky, expensive, or even impossible. By installing one of our adapters on either end of the existing coaxial cable you can easily and quickly convert your coax to an Ethernet transmission path. It requires no software setup, does not introduce latency and can achieve 100 mbps up to 820 ft.” announces Brandon Wilson, Executive Vice President.
