

Z-WIRE® MoCSY®7 Coaxial Cable Technology Coaxial Cable with Corrosion Inhibitor Protection

Innovation for the Last Mile™

Z-WIRE® dry, corrosion inhibitor

CUTTING EDGE TECHNOLOGY

Moisture, humidity, and pollution are some of the external elements causing corrosion on the coaxial cable shielding tape and center conductor. Corrosion to these parts of the cable can lead to potential signal loss, lower return loss, and pictures with ghosting or snow. The results are costly truck rolls and service calls.

Today's advanced two-way broadband system networks must perform at the highest levels to ensure quality of service and customer satisfaction. PCT's patented MOCSY®7 Z-Wire® coaxial cable utilizes a dry, protective coating to the shielding tape and center conductor. The coating process creates a bond to the aluminum shielding, creating a clean, uniform, and reliable barrier for a sound installation with reliable, long lasting performance.

ADVANCED FEATURES

- ✓ Patented DRY corrosion inhibiting agent (US Patent Number 7084343)
- ✓ Center conductor corrosion inhibitor applied to all MOCSY™ coaxial cable
- ✓ Simple, clean installation without messy or greasy compounds
- ✓ Series 6, 11, Standard Shield, Tri-Shield, Quad-Shield, & Messenger cables
- ✓ Ensures system reliability
- ✓ RoHS compliant
- ✓ MoCA compatible
